1. Introduction & Vision

The cryptocurrency ecosystem continues to thrive on community engagement, organic culture, and interactive entertainment. **Flappy CZ (\$FCZ)** is an innovative, community-centric Play-to-Earn mini-game built directly into the Telegram Mini App ecosystem, heavily inspired by one of the most iconic figures in the crypto world.

Our core mission is to bridge hyper-addictive classic gaming mechanics with a transparent, skill-based Web3 reward structure. By launching via Pump.fun, Flappy CZ guarantees a 100% fair launch with zero pre-mines or unfair developer allocations, ensuring that the community holds the steering wheel from Day 1. Unlike traditional chance-based meme projects, \$FCZ rewards pure gaming talent, focus, and competitive grit.

2. Game Mechanics & Ecosystem

Flappy CZ features a refined interpretation of the legendary "Flappy" gameplay loop. Players tap to navigate their character smoothly through a progression of obstacles. Each successful pass increments the player's score, which is instantly broadcasted to a live global network.

Key Pillars of the Ecosystem:

- **Seamless Telegram Mini App:** No external downloads, extensions, or third-party authenticators required. Players open their Telegram chat and start competing globally within seconds.
- **Dynamic 48-Hour Leaderboard Cycles:** The global scoring matrix completely resets every 48 hours. This dynamic timeframe ensures that new community members always have an equal, unhindered opportunity to claim the top ranks without being dwarfed by historical high scores.
- **Server-Side Anti-Cheat Architecture:** To guard the integrity of the reward distribution, all gameplay metrics and high-score packets are verified server-side through precise cryptographic hashes. Bot telemetry, click automation, and score manipulation are immediately detected and disqualified automatically.

3. Pump.fun Optimized Tokenomics

4. Leaderboard Reward Distribution Algorithm

At the exact conclusion of every 48-hour tournament cycle, a prize pool of **100.000 \$FCZ** is mathematically apportioned and distributed to the Top 20 verified players on the global leaderboard.

The distribution utilizes a logarithmic decay function to ensure that while the absolute top performers receive the highest reward coefficients, the entire tier of top 20 players is incentivized to maintain high daily engagement.
